XTR ENFIELD

THE DEVIL IS IN THE DETAIL

ZODIAC'S PAN-SHOVEL TRIBUTE
IT'S A CHOPPER BABY

After witnessing the first Elektrafuture - the electric off-road motorcycle festival in St Tropez - I thought of a challenge. Could some mates and I ride electric bikes between the two most dangerous volcanoes in Europe - Vesuvius and Etna - using solar power alone? My plan is to use my 'motohome' as the back-up vehicle (I've converted a former ambulance and equipped it with solar panels) and use its solar power to charge the Cake bikes we'll be riding. We'll wild camp too. Bonkers? Possibly. But who likes normality? Me and my friends Adelio and Jose will be on the Cakes and Malaka and Lesley will drive the van. I don't know if we'll be able to charge three bikes on rotation from the solar, but it's worth a shot. And we'll take my Honda XR600R as a rescue mule just in case...
